

# IDS Version 1.2 Install Instructions

1. Download the appropriate zip file from the Midwest Distributors Website. Save this file to your desktop or another convenient location on your computer.
2. Once the file is saved, access that file in your computer and double click on the file. This is a self extracting zip file, so you will be prompted to click on the Setup button. Left click on the setup button to start your installation.

## Prompts for Installation

1. When the IDS Installation Interface opens, follow the prompts through the installation process.
2. Select Next to start the installation process.
3. To continue installation, you must accept the License Agreement by clicking on the YES Button. Clicking NO will end the installation.
4. Enter your user information - User Name and Company Information.
5. Click Next to continue.

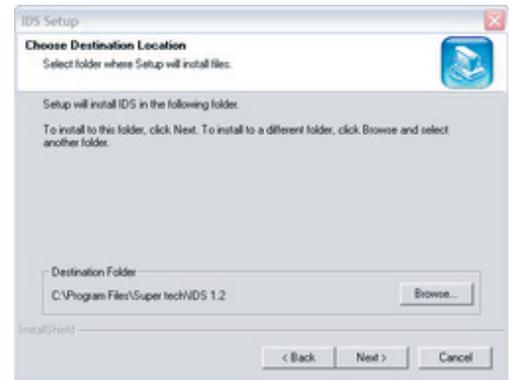

# IDS Version 1.2 Install Instructions

6. If you made an error in the User information input, you can select No in this option menu and go back to make corrections. Once the information is correct, click Yes to continue with the installation.

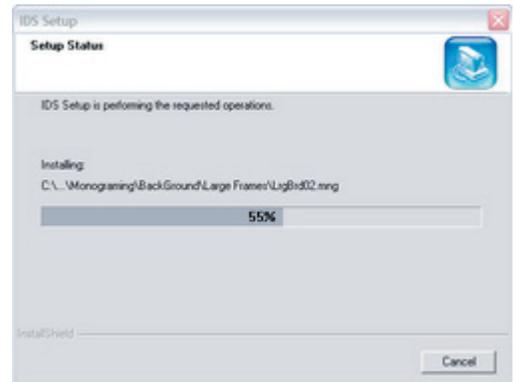

7. IDS will automatically select the default installation location. You are able to change this location if you desire. It is not recommended to change the location, it may make updating at a later date more difficult.

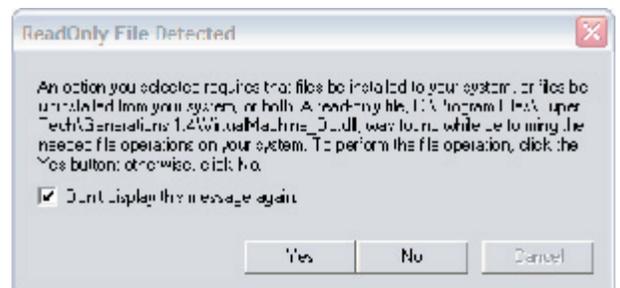

8. Click on Next to continue with the installation.

9. IDS will display the installation progress window. During this time, other windows that may be open may require a response from you.

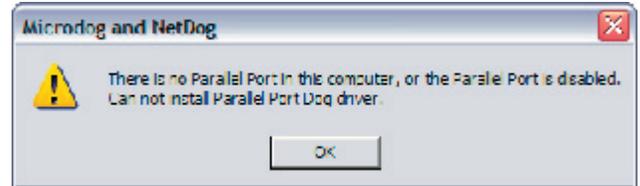

10. All requests to install or remove files from your computer while installing should be answered Yes. You may answer this once by placing a check mark in the **Don't display this message again** in the option box.

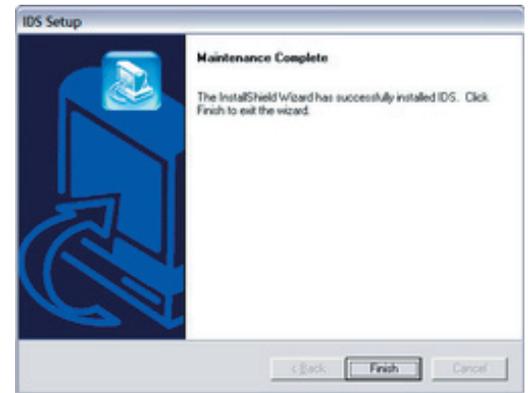

# IDS Version 1.2 Install Instructions

11. Once the Microdog and NetDog Dialog box appear, click on the OK button to continue.

12. When IDS Version 1.2 has finished installing on your system, the Maintenance Complete window will open. Click on the Finish Button to complete installation.

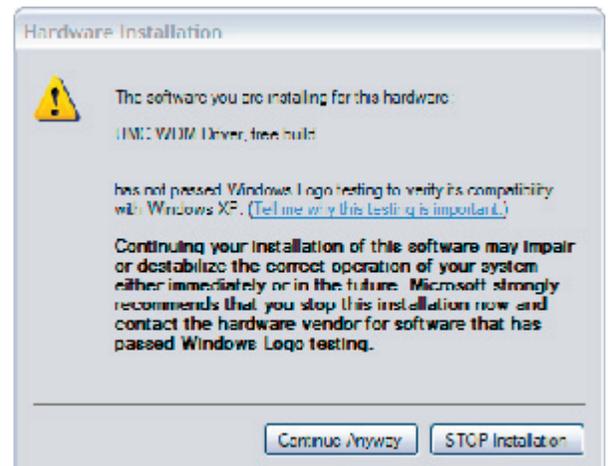

## Dongle Driver Installation

***You may install IDS 1.2 with the Dongle in the computer IF you have had Version 1.0 of IDS installed on your computer system.***

If the IDS Dongle (Security Device) is installed on your computer, you will be immediately taken to the new Dongle Driver installation window.

If you have removed your dongle for installation of Version 1.2, as soon as you plug the dongle into your USB port, the driver installation will begin.

The IDS Dongle is safe for installation on your Windows System. Click on the Continue Anyway button to install the USB Dongle Drivers.

Click on the IDS 1.2 Icon on your desktop and you are ready to start using all the new IDS 1.2 features.
